

Re: LEEDS Certification

This letter is in regards to the recycled content of Star Pipe Products manufactured in China. Our products consist of virgin and recycled raw materials used for molding ductile iron castings in the underground utility market. Recycled material is at minimum of 30% and can go as high as 50% for pre-consumer use. This is dependent on the availability of recycled material at the time of manufacturing. The recycled material is made up from sorted scrap steel and castings that have been recycled and certified for this purpose.

We trust that this will satisfy your LEEDS ó MR 4.1/4.2 requirements but if any further information is require please contact us.

Thank you for your consideration on this LEEDS project.

Sincerely,

Roger S Johnson
Sr. Product Manager
