

Webinar: Sprinkler Protection for Parking Structures

The Impact of Hazard Classification Changes & Evolving Challenges

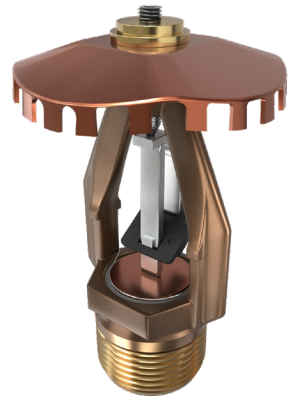

Is your parking structure job impacted by changes in technology as related to automobiles, construction techniques or storage systems? This can present significant challenges for fire protection in these critical spaces!

Viking is now offering a webinar covering this topic in detail.

NFPA 13, the standard for the installation of sprinkler systems, has responded to these changes by revising the hazard classifications for parking structures. Protection guidance is also found in FMDS 7-15 Garages and FMDS 3-26 Fire Protection for Non-Storage Occupancies. Explore the guidance in these documents and the impact of recent changes on sprinkler design. Discuss evolving fire protection challenges relating to alternative fuel vehicles, updating sprinkler systems and the need for retroactive installation of sprinklers!

At the end of this webinar, the participant will be able to:

- Discuss the history and current state of fire protection in parking structures
- Describe the fire protection challenges presented by new parking technologies
- Discuss potential sprinkler system solutions to these challenges

Viking's revolutionary Sprinkler Selector ensures that you can find the right sprinkler for the job — every time. Get started by visiting webtools.vikingcorp.com/sprinklerselector
