

Accelerators and Exhausters

An accelerator or exhauster, attached to a dry pipe valve, causes the valve to trip quickly upon sprinkler operation. These devices operate when loss of system air pressure exceeds a predetermined rate. Unless otherwise noted in the listing, these accelerators and exhausters have 175 psi (1205 kPa) rated working pressure.

Model E-1

Model E-1 Accelerator, Model B-1 Antiflooding Device Assembly. For use with Model F-1 and E-2 dry pipe valves.
